**Subject:** Simplest method to trace metals

Dear Dr. Wake,

My name is Jessica at Diagnocine LLC. We sell cutting-edge life science reagents, including multiple mineral test kits from Funakoshi in Japan. After hearing the news of the massive toll of the Animas River spill in Colorado, we thought that our test kits ([Metallogenics' metallo assay kits](#)) for zinc, iron and copper may be interest to you and for other state government initiatives. The kits are extremely user friendly and can be easily adapted to your state laboratories. We have test kits for other heavy metals as well. The data output is less than 10min and the test kits is for any typical microplate readers.

For details, please click following link.

Upon review, please let me know if you are interested in.

Best regards,

Jessica
